**MADE
IN
THE USA**

CLEANING INSTRUCTIONS

Water or Isopropyl Alcohol may be used to clean the spittoon as necessary. Be sure to fully dry spittoon before use.

CARE & MAINTENANCE

Gently tap jar on solid surface to dislodge fine material from inside lid before opening. Use a brush to clean exhaust screens when necessary.

CAUTION: DO NOT OVER-TIGHTEN LID!

Friction will cause difficulty when time comes to remove lid for cleaning.

HOW TO USE

Finish your vaporizing session

- 1) Remove stem from vaporizer
- 2) Press firmly against the Spittoon's inlet
- 3) Blow into the stem briefly to empty contents of stem into jar

CAUTION: Ensure your stem has made a tight seal with the inlet before blowing
(Optional): Set vaporizer to max temperature, reattach empty stem & repeat steps 2-3

EXHAUST SCREEN NOTES

Ensure screens are properly seated into the grooves before use. While both screens are installed, two screens may not be necessary if you are vaporizing coarse material. Replacement screens are available for purchase by emailing Questions@Delta3DStudios.com
